

Your live stream

Streams recurring events, one-offs or a 24/7 linear live channel

Live encoder

Relies on a live encoder to produce a multi-bitrate stream packaged as fMP4 to ready it for ABR streaming and supports adding a second encoder for failover

Unified Origin

Uses a single-format-encoded multi-bitrate file as ingest and dynamically packages content into desired formats, while supporting subtitles, advanced audio, HDR, Dolby Vision, single-key and multiple-key DRM

Dynamic ad insertion

Offers the flexibility to dynamically replace content based on SCTE-35 markers within a workflow compatible with third-party ad-insertion services

Content delivery network

Supports the integration of one or more CDNs into your setup to deliver content with the highest possible performance and availability wherever your audiences are

Stream all formats to any device

Delivers your stream in the right format to all of your audiences' devices, whether mobile, tablet, desktop or TV
